Taking care of your electronics and our Earth

What happens to the items that we collect?

Each item is reviewed for potential reuse and refurbishing - about 20 % to 30% can be reused. Other items are broken down at our facility for parts and materials (pc's, printers, appliances, etc.) We recover steel, aluminum, copper, glass, plastics and other raw materials that are further processed with specialty recycling companies.

Is your Data Secure?

EVERY hard drive that comes into our facility is subjected to a standard, one-pass overwrite of the data (also known as a "wipe"). This is done at no charge.

We help you protect the environment...

By keeping electronic waste materials out of landfills and putting them back into the manufacturing process to make new products

*We follow the 3Rs - **Recycle - Reuse - Refurbish***

Verde Tech is a woman-owned, minority vendor serving the North Texas area

We recycle much more
